PRODUCT BROCHURE / HELMET VERSION 1

# Routing Helmet V1

## Hear. Understand. Act. Speak. Locally.

CORE / CONCEPT RENDER / NOT FABRICATED OR CERTIFIED HARDWARE

THE PROMISE

**Talk naturally. Get one safe, useful action without touching a screen.**

**VERSION 1 / SEPTEMBER 2026**

Voice-first helmet electronics concept and design-to-cost roadmap

01 / THE EXPERIENCE

# Say it. See it happen.

A short spoken request becomes one typed action, checked by deterministic policy and answered with a concise result.

| | | |
|---|---|---|
| YOU | Turn the helmet light on. | Light on at 40%. |
| YOU | Take a picture. | Photo captured. |
| YOU | Play the next song. | Skipping. |
| YOU | Navigate home. | Starting the saved route. |
| YOU | How much battery is left? | Battery is at 82%. |

RIDE-SAFE BEHAVIOR

**Short, interruptible audio while moving. Long answers wait until stationary.**

02 / WHAT IT CAN DO

# Eight capability families. One calm interface.

Version 1 exposes 26 allowlisted function calls. Services may live locally or on the paired phone, but the rider uses one consistent voice surface.

### 01 Camera

Take a photo, start/stop video, mark a ride moment.

### 02 Music

Play, pause, skip, check the track, and set safe volume.

### 03 Lights

Control visibility light and brightness through policy limits.

### 04 Navigation

Start saved routes, repeat cues, and locate the parked vehicle.

### 05 Calls

Answer, reject, call a known contact, and send quick messages.

### 06 Notes

Record an indicated voice note and share location for a fixed time.

### 07 Helmet state

Read battery, connectivity, temperature, and fault summaries.

### 08 Emergency

Hand an SOS request to a separate deterministic controller.

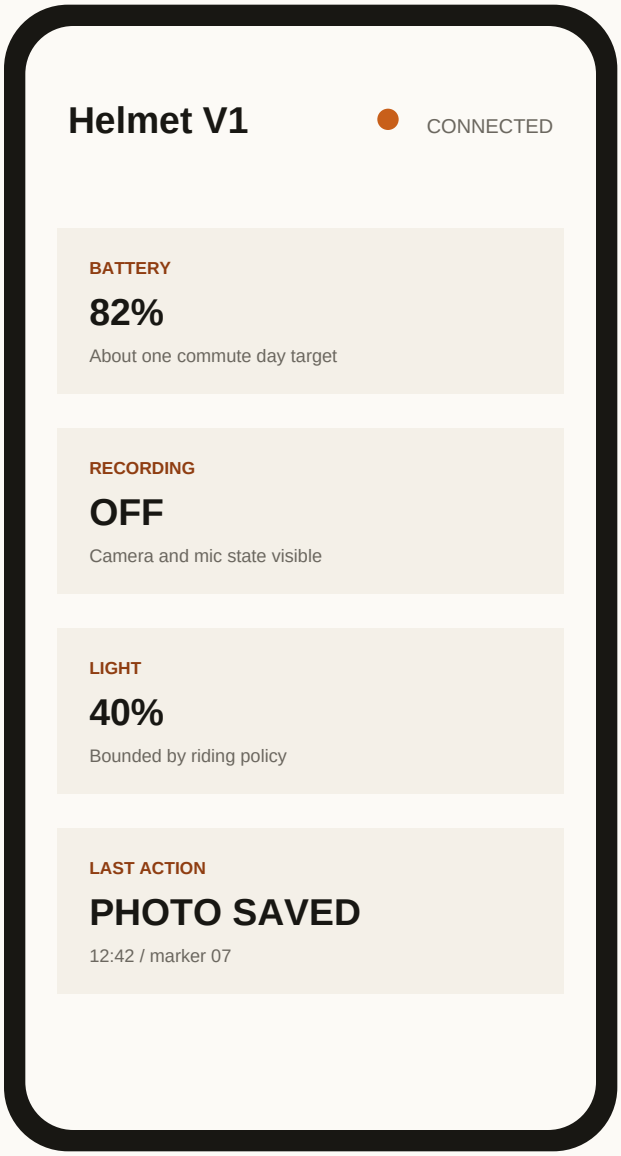

**EXAMPLES**

Take a picture / Play music / Turn on the light / Navigate home / Call Alex / Start a voice note

03 / COMPANION FRONTEND

# One glance before the ride. No screen work during it.

The phone handles setup, providers, permissions, saved places, contacts, updates, and post-ride review. The helmet owns the immediate voice experience.

## Helmet

- Voice and tones
- Physical cancel
- Visible recording state
- Local lights and status
- Short spoken results

## Phone

- Maps and contacts
- Spotify / music provider
- Optional assistant queries
- Setup and permissions
- Signed updates and ride review

DESIGN RULE

**The app may be rich. The ride experience stays sparse.**

04 / TRUST BY CONSTRUCTION

# The model proposes. Deterministic systems decide.

Natural language makes the interface flexible. It does not make the model an authority over hardware, emergency behavior, battery protection, or the rider's attention.

| | | |
|---|---|---|
| 01 | **LANGUAGE** | Transcript, typed proposal, short reply |
| 02 | **POLICY** | Allowlist, arguments, confidence, state, confirmation |
| 03 | **SERVICE** | Helmet control or paired-phone action |
| 04 | **SAFETY** | Physical cancel, SOS controller, thermal and audio limits |

PRIVACY IS PHYSICAL

**Visible recording state. Local audio by default. Explicit cloud policy. Signed updates. Hardware mute and cancel.**

AN INTEGRATED SELLABLE HELMET REQUIRES OEM CO-DESIGN AND FINISHED-PRODUCT CERTIFICATION WORK.

05 / DESIGN TO COST

# Designed toward INR 6k-10k.

A plausible target for the recurring electronics module at 1,000-10,000 units - not yet a supplier quote, full certified helmet cost, or retail price.

**FULL CAMERA + AUDIO MODULE**

**INR 8,200**

PLANNING DESIGN CENTER

**CAMERA-FREE LITE**

**INR 5.5k-6.5k**

AGGRESSIVE VOLUME TARGET

PLANNING LANDED RANGE: INR 4,950-9,700

## What keeps it inside the target

01 Use the phone for GPS, cellular data, contacts, streaming, and optional cloud AI.

02 Prototype on commodity compute; keep the 26-call contract independent of the chip choice.

03 Make camera and advanced vision optional SKUs.

04 Treat custom silicon NRE, certification, retail margin, and service as separate programs.

NEXT BUILD

**A commodity-hardware bench module, companion setup screen, and real microphone/speaker fixture - with the 26-call policy contract held stable.**

Concept appearance, performance, manufacturing cost, and certification remain subject to engineering validation.
